DANWINS Pharmacy DRIVE-THRU

Designed by a Pharmacist and Pharmacy Owner

DRX was created in 2018 by Dan Safee, pharmacist and owner of Danwins Pharmacy. Dan's objective was to create a technology platform for his own pharmacy to allow Danwins to provide higher levels or service at a lower cost of doing business. Dan was persuaded by other pharmacy owners to license his proprietary system under a SaaS model. DRX Software, LLC was formed in November of 2020. Today, DRX is in use in over 40 states and is serving Regional Chains, Retail/Independents, FQHCs, Hospitals and Health Systems, Specialty, LTC, Veterinary, and Compounding pharmacies.

CORE VALUES OF DRX

THE PHARMACY OWNS THEIR DATA

Pharmacies maintain full control and ownership of their data, ensuring privacy, security, and interoperability.

BEST VALUE PHARMACY SYSTEM

DRX provides more value for the money our customers spend on their pharmacy technology.

THINK LIKE A PHARMACY OWNER

We think like our customers in every decision we make about the business because we are also customers of DRX.

WATCH A 4-MINUTE DEMO

THE PHARMACY SYSTEM
DESIGNED, DEVELOPED AND
BUILT BY PHARMACISTS

BENEFIT OF A CLOUD BASED SYSTEM

- Remote access without requiring a VPN tunnel
- Updating your DRX instance is as easy as refreshing your browser tab
- Modern architecture providing for greater security security with less hardware maintenance
- Significantly lower start-up and ongoing costs of ownership

WHAT'S INCLUDED WITH DRX?

PHARMACY MANAGEMENT SYSTEM

DRX is full-featured, easy to use, and easy to learn. Its intuitive design makes it obvious that it was designed by an experienced pharmacy owner-operator.

POINT-OF-SALE

Point-of-sale is integrated into the platform eliminating the need for dedicated workstations and costly proprietary POS hardware. DRX includes modern features such as integrated payment processing for credit, FSA, and HSA cards, click-to-pay and mobile payments and card-not-present transactions.

ENHANCED COMMUNICATIONS

DRX makes it easy to initiate and receive patient and provider communications through an integrated phone system and IVR system with SMS/text, email, and mobile messaging. DRX even includes a provider portal commonly used for compounding and veterinary use cases.

ROBUST REPORTING

DRX allows users to leverage any data element within their instance to generate actionable information through the use of standard reporting or DRX's custom reporting engine. DRX's open API also makes it easy to pull pharmacy data for use in a data warehouse or external reporting system of your choosing.

MED SYNC AND COMPLIANCE PACKAGING

Medication Synchronization can have a profound impact on your pharmacy's ability to better manage inventory while simultaneously improving the health of your patients. Med sync is also critical to successful implementation of a compliance packaging program, Long-Term Care at Home and an appointment-based pharmacy model. DRX's med sync functionality is unmatched.

COMPOUNDING

DRX has enabled compounding pharmacies to eliminate the need for 3 rd party compounding software providing robust feature set for DRX users that provide both sterile and non-sterile compounding services.

TELEPHARMACY

DRX is ideal for telepharmacies as it simplifies remote pharmacist access, includes integrated video consultation, and supports remote product verification through either the use of USB-connected web cameras or integration with the Eyecon #9430. Contact PTS to learn more.

BRANDED WEBSITE AND MOBILE APP

DRX can help you build, grow, or enhance your pharmacy image through a branded website and patient-facing mobile application that allows for refill requests, patient access to their medication profile and medication education information.
